When World War II broke out in Europe, the American army had no specialized division of mountain soldiers. But in the winter of 1939-40, after a tiny band of Finnish mountain troops brought the invading Soviet army to its knees, an amateur skier named Charles Minot "Minnie" Dole convinced the United States Army to let him recruit an extraordinary assortment of European expatriates, wealthy ski bums, mountaineers, and thrill-seekers and form them into a unique band of Alpine soldiers. These men endured nearly three years of grueling training in the Colorado Rockies and in the process set new standards for both soldiering and mountaineering. The newly forged 10th Mountain Division finally faced combat in the winter of 1945, in Italy's Apennine Mountains, against the seemingly unbreakable German fortifications north of the Gothic Line. There, they planned and executed what is still regarded as the most daring series of nighttime mountain attacks in U.S. military history, taking Mount Belvedere and the sheer, treacherous face of Riva Ridge to smash the linchpin of the German army's lines. Drawing on unique cooperation from veterans of the 10th Mountain Division and a vast archive of unpublished letters and documents, *The Last Ridge* is written with enormous warmth, energy, and honesty. This is one of the most captivating stories of World War II, a blend of *Band of Brothers* and *Into Thin Air*. It is a story of young men asked to do the impossible, and succeeding. On cover: OTS 1 At the outbreak of World War II the German Kriegsmarine still had a relatively small U-boat arm. To reach Britain's convoy routes in the North Atlantic, these boats had to pass around

the top of the British Isles - a long and dangerous voyage to their "hunting grounds". Germany's larger surface warships were much better suited to this kind of long-range operation. So, during late 1939 the armoured cruiser *Deutschland*, and later the battlecruisers *Scharnhorst* and *Gneisenau* were used as commerce raiders, to strike at Allied convoys in the North Atlantic. These sorties met with mixed results, but for Germany's naval high command they showed that this kind of operation had potential. Then, the fall of France, Denmark and Norway in early 1940 dramatically altered the strategic situation. The Atlantic was now far easier to reach, and to escape from. During 1940, further moderately successful sorties were made by the cruisers *Admiral Scheer* and *Admiral Hipper*. By the end of the year, with British mercantile losses mounting to surface raiders and U-Boats, plans were developed for a much larger raid, first using both cruisers, and then the two battlecruisers. The climax of this was Operation Berlin, the Kriegsmarine's largest and most wide-ranging North Atlantic sortie so far. *Scharnhorst* and *Gneisenau* remained at sea for two months, destroying 22 Allied merchant ships, and severely disrupting Britain's lifeline convoys. So, when the operation ended, the German commander, Admiral Lütjens was ordered to repeat his success - this time with the brand new battleship *Bismarck*. The rest, as they say, is history. These earlier Atlantic raids demonstrated that German surface ships could be highly effective commerce raiders. For those willing to see though, they also demonstrated just how risky this strategy could be. Covering a fascinating and detailed analysis of the Kriegsmarine's Atlantic raids between 1939 and 1941, this book will appeal to readers interested in World War II and in particular in Germany's naval operations. By every principle of war, every shred of military logic, logistics support to Canada's Task Force Orion in Afghanistan should have collapsed in July 2006. There are few countries that offer a greater challenge to logistics than Afghanistan, and yet Canadian soldiers lived through an enormous test on this deadly international stage - a monumental accomplishment. Canadian combat operations were widespread across southern Afghanistan in 2006, and logistics soldiers worked in quiet

desperation to keep the battle group moving. Only now is it appreciated how precarious the logistics operations of Task Force Orion in Kandahar really were. What the Thunder Said is an honest, raw recollection of incidents and impressions of Canadian warfighting from a logistics perspective. It offers solid insight into the history of military logistics in Canada and explores in some detail the dramatic erosion of a once-proud corner of the army from the perspective of a battalion commander. An incisive analysis of Britain's decision-making role in the Yugoslavian conflict of the 1990s and in the formation of its successor states. Tracing the evolution of British policy from the onset of war in Croatia and Bosnia to the NATO action in Kosovo, and beyond, this major work examines the underlying factors governing that policy, and its role in shaping the international 'consensus'. British policy is examined through parliamentary proceedings in the House of Commons and Lords, as well as through evidence offered at select committees, reports from political and humanitarian agencies, private interviews with protagonists and media coverage, in relation to the situation on the ground and to policy development on the part of other leading world powers and institutions. By the spring of 1945 the Allies were sweeping all before them in the Pacific War against Japan, and a series of victories had reclaimed many of the islands and territories seized by the Imperial Japanese forces in the early months of the war. The dark days of humiliating defeat were far behind the unstoppable Allied juggernaut victory was now assured. The question was where the last battle would be fought. That place was the island of Okinawa. This book details the struggle for the island as US Marines and Army units battled determined Japanese defenders in the last battle of World War II. The transformation of V Corps from a traditional tank-heavy corps committed to a high intensity battle in central Europe to a lighter, more deployable reaction force simply based in central Europe is an exemplar of the changes that confronted the army at large to be sustained. This narrative outlines the major shifts in the operational context in which V Corps found itself after 1990 and discusses the major military operations in which the corps took part. Those operations gave the headquarters the essential "feedback" to adjust its organization and training to be more in synch with the requirements it faced. The study offers some tentative conclusions about the process of transformation of the Army in Europe, as seen from the perspective of one heavy, mechanized corps. The British military confronted significant

challenges during the invasion of Iraq and Afghanistan. Adhering to the principles and doctrines of previous campaigns, they failed to prevent Basra and Helmand from descending into lawlessness, criminality, and violence. By juxtaposing the deterioration of these cities against Britain's celebrated legacy of counterinsurgency, this investigation identifies both the contributions and limitations of traditional tactics in such settings, exposing the gap between the ambitions and resources, intent and commitment, that proved so disastrous to the operation. In its detailed account of the Basra and Helmand campaigns, this volume conducts an unprecedented assessment of British military institutional adaptation in response to operations gone awry. It calls attention to the effectiveness of insurgent tactics and the danger of ungoverned spaces shielding hostile groups and underscores the need for the British military to acquire new skills for meeting irregular threats in future wars.
