The Sound of Innovation Dec 02 2020 How a team of musicians, engineers, computer scientists, and psychologists developed computer music as an academic field and ushered in the era of digital music. In the 1960s, a team of Stanford musicians, engineers, computer scientists, and psychologists used computing in an entirely novel way: to produce and manipulate sound and create the sonic basis of new musical compositions. This group of interdisciplinary researchers at the nascent Center

for Computer Research in Music and Acoustics (CCRMA, pronounced “karma”) helped to develop computer music as an academic field, invent the technologies that underlie it, and usher in the age of digital music. In *The Sound of Innovation*, Andrew Nelson chronicles the history of CCRMA, tracing its origins in Stanford's Artificial Intelligence Laboratory through its present-day influence on Silicon Valley and digital music groups worldwide. Nelson emphasizes CCRMA's interdisciplinarity, which stimulates creativity at the intersections of fields; its commitment to open sharing and users; and its pioneering commercial engagement. He shows that Stanford's outsized influence on the emergence of digital music came from the intertwining of these three modes, which brought together diverse supporters with different aims around a field of shared interest. Nelson thus challenges long-standing assumptions about the divisions between art and science, between the humanities and technology, and between academic research and commercial applications, showing how the story of a small group of musicians reveals substantial insights about innovation. Nelson draws on extensive archival research and dozens of interviews with digital music pioneers; the book's website provides access to original historic documents and other material.

The Oxford Handbook of Timbre Aug 22 2022 Despite its importance as a central feature of musical sounds, timbre has rarely stood in the limelight. First defined in the eighteenth century, denigrated during the nineteenth, the concept of timbre came into its own during the twentieth century and its fascination with synthesizers and electronic music—or so the story goes. But in fact, timbre cuts across all the boundaries that make up musical thought—combining scientific and artistic approaches to music, material and philosophical aspects, and historical and theoretical perspectives. Timbre challenges us to fundamentally reorganize the way we think about music. The twenty-five essays that make up this collection offer a variety of engagements with music from the perspective of timbre. The boundaries are set as broad as possible: from ancient Homeric sounds to

contemporary sound installations, from birdsong to cochlear implants, from Tuvan overtone singing to the tv show *The Voice*, from violin mutes to Moog synthesizers. What unifies the essays across this vast diversity is the material starting point of the sounding object. This focus on the listening experience is radical departure from the musical work that has traditionally dominated musical discourse since its academic inception in late-nineteenth-century Europe. Timbre remains a slippery concept that has continuously demanded more, be it more precise vocabulary, a more systematic theory, or more rigorous analysis. Rooted in the psychology of listening, timbre consistently resists pinning complete down. This collection of essays provides an invitation for further engagement with the range of fascinating questions that timbre opens up.

Sound of Africa! Sep 30 2020 Boosting the bass guitar, blending the vocals, overdubbing percussion while fretting over shoot-outs in the street. Grumbling about a producer, teasing a white engineer, challenging an artist to feel his African beat. Sound of Africa! is a riveting account of the production of a mbaqanga album in a state-of-the-art recording studio in Johannesburg. Made popular internationally by Mahlathini and the Mahotella Queens, mbaqanga's distinctive style features a bass solo voice and soaring harmonies of a female frontline over electric guitar, bass, keyboard, and drumset. Louise Meintjes chronicles the recording and mixing of an album by Izintombi Zesimanje, historically the rival group of the Mahotella Queens. Set in the early 1990s during South Africa's tumultuous transition from apartheid to democratic rule, Sound of Africa! offers a rare portrait of the music recording process. It tracks the nuanced interplay among South African state controls, the music industry's transnational drive, and the mbaqanga artists' struggles for political, professional, and personal voice. Focusing on the ways artists, producers, and sound engineers collaborate in the studio control room, Meintjes reveals not only how particular mbaqanga sounds are shaped technically, but also how egos and artistic sensibilities and race and ethnicity influence the mix. She analyzes how the turbulent identity politics surrounding Zulu ethnic nationalism impacted mbaqanga artists' decisions in and out of the studio. Conversely, she explores how the global consumption of Afropop and African images fed back into mbaqanga during the recording process. Meintjes is especially attentive to the ways the emotive qualities of timbre (sound quality or tone color) forge complex connections between aesthetic practices and political ideology.

Vivid photos by the internationally renowned photographer TJ Lemon further dramatize Meintjes' ethnography.

Reinventing Bach Dec 22 2019 DIV Johann Sebastian Bach - celebrated pipe organist, court composer and master of sacred music - was also a technical pioneer. Working in Germany in the early eighteenth century, he invented new instruments and carried out experiments in tuning, the effects of which are still with us today. Two hundred years later, a number of extraordinary musicians have utilised the music of Bach to thrilling effect through the art of recording, furthering their own virtuosity and reinventing the composer for our time. In Reinventing Bach, Paul Elie brilliantly blends the stories of modern musicians with a polyphonic account of our most celebrated composer's life to create a spellbinding narrative of the changing place of music in our lives. We see the sainted organist Albert Schweitzer playing to a mobile recording unit set up at London's Church of All Hallows in order to spread Bach's organ works to the world beyond the churches, and Pablo Casals's Abbey Road recordings of Bach's cello suites transform the middle-class sitting room into a hotbed of existentialism; we watch Leopold Stokowski persuade Walt Disney to feature his own grand orchestrations of Bach in the animated classical-music movie Fantasia - which made Bach the sound of children's playtime and Hollywood grandeur alike - and we witness how Glenn Gould's Goldberg Variations made Bach the byword for postwar cool. Through the Beatles and Switched-on Bach and Gödel, Escher, Bach - through film, rock music, the Walkman, the CD and up to Yo-Yo Ma and the iPod - Elie shows us how dozens of gifted musicians searched, experimented and collaborated with one another in the service of a composer who emerged as the prototype of the spiritualised, technically savvy artist. /div
